# Technology to Make Mini-grids Social

**Figure 1.** BPC electrician installs a GridShare and breaker box near the electrical meter (a). LED indicator lights with an instructional sign are installed near the rice cooker (b). Borrowing from familiar power-indicating graphics on cell phones, the yellow bars next to the green LED remind users that when the green light is lit, the grid is at ‘full power’ and any appliances may be used, while the empty bars next to the red LED suggest that the red light means the grid electricity is limited and only low power appliances can be used.

**Figure 3.** A hypothetical timeline of two homes in a brownout to clarify the indication and enforcement aspects of the GridShare. A rice cooker is a ‘large appliance’ unless on warming mode, which for a typical 600 W rice cooker requires approximately 40 W.

# Biomass can replace coal – Professor

By Sandra Sokial

**KOTA KINABALU:** Palm oil mill waste, or commonly known as biomass, can feasibly be used to replace coal as a source of energy in Sabah.

Dr Daniel M Kammen, a professor of energy at the University of California, Berkeley, disclosed this in his talk during a forum on Energy Options for Sabah here yesterday.

He said biomass presented an attractive electricity supply option and should continue to receive support from the government and utilities.

Kammen, who carried out a study on clean energy options for Sabah, said that biomass waste projects were cost competitive compared with coal, adding that it also solved two environmental problems at once.

“One is the problem of disposing of potentially hazardous mill waste in open ponds and landfills and

Adrian Lasimbang

Dr Daniel M Kammen

the problem of supplying Sabah's energy demand,” he said.

Several oil palm mills in Sabah have already adopted the project and a number of national incentives are aimed to stimulate further investments.

Kammen said based on the 2008 palm oil industry production statistics and conservative growth estimates, they calculated that 700MW of theoretical baseload capacity was economically feasible and

logistically achievable via a four-project per-year ramp-up programme.

“We recommend that Sabah support this project,” he said. During the study, Kammen, Tyler McNish and Benjamin Gutierrez also carried out a research on other energy options such as hydropower, solar, wind, geothermal and demand-side energy efficiency.

He also recommended phasing out fossil-fuel subsidies that distort energy markets and the

10MW limit on investment under the small renewable energy power programme be repealed.

“There should be continued research and outreach efforts targeted at increasing the quantity of grid-connected electricity available from palm oil mills besides recognising renewable energy status as a premium product.

“It is also important to continue studying the feasibility of renewable investments at known geothermal, wind and environmentally-sound micro hydro sites,” he said.

In addition to this, Kammen said the continuation and extension of Malaysia's existing solar promotion programmes should be continued, and supplement these efforts by launching a state-level solar energy commission.

Another speaker, Adrian Lasimbang of the Pacos Trust, believes that Sabah should be a role model and

The public participating in the question-and-answer session with the experts during the forum yesterday.

spearhead the development of renewable energy (RE) in Malaysia.

Also touching on biomass as another option to electricity supply, he said there were over 110 oil palm mills in Sabah, and were mainly located in the east coast of the state.

“With such numbers, there is abundance of biomass waste which could be used for power supply thus reducing the electricity shortage faced by the people in the east coast of Sabah.

“We have initiated several projects in several

villages to utilise agro-based waste as alternative to power supply. It helps to generate jobs for the villagers and other support services, such as transportation,” he said.

About 400 people attended the forum which was organised by Green Surf.
