Background of the Project

The Nepal Energy Efficiency Program III (NEEP III) is the third phase of a technical cooperation project agreed between the Government of Nepal (GoN) and the Federal Republic of Germany. With support of the GIZ, NEEP III is implemented by the Ministry of Energy, Water Resource and Irrigation of Nepal government and sets out to improve the preconditions for planning and implementation of measures for the efficient use of energy in Nepal (overall project objective). NEEP III uses a multi-level approach consisting of 4 components as per the orders namely:

- Policy Advice (Component-1)
- Support to Nepal Electricity Authority (Component -2)
- Energy Efficiency Market Development (Component-3)
- Energy Efficiency in Higher Education/Vocational Training (Component-4)

Component 2 of NEEP III focuses on developing solutions to the challenges faced by Nepal Electricity Authority (NEA) on the supply and demand management of the distribution network. NEA was founded on August 16, 1985 (Bhadra 1, 2042 B.S) under the Nepal Electricity Authority Act 1984, through the merger of the Department of Electricity, Ministry of Water Resources, and Nepal Electricity Authority and related Development Boards. The primary objective of NEA is to generate, transmit and distribute adequate, reliable and affordable power by planning, construction, operating and maintaining all generation, transmission and distribution facilities in Nepal's power system both interconnected and isolated.

OBJECTIVE

Nepal Energy Efficiency program (NEEP III) is a Technical Cooperation (TC) program agreed between Government of Nepal (GoN) and Federal Republic of Germany.

The main objective of the program are as follow:

1. Improving policy frameworks for the implementation of energy efficiency and conservation measures.
2. Strengthening the capabilities of the Nepal Electricity Authority (NEA) in managing power supply and demand. This involves several measures towards capacity building and loss reduction activities on supply and demand side.
3. Developing a market for energy efficiency services and energy-efficient products to

improve the essential economic and financial conditions for energy efficiency and conservation measures.

4. Initiating the integration of energy efficiency into university and vocational education.

SCOPE OF WORK

GIS network mapping for entire Nagarkot feeder, starting with GPS survey with 3.0 meter accuracy, of electrical assets on the Nagarkot 11 kV feeder from Bhaktapur Substation covering all HT, HLT and LT pole locations on the feeder, pole numbering and pole painting. The map coverage includes HT lines, LT lines and DTRs, indicating number of service connections on each pole.

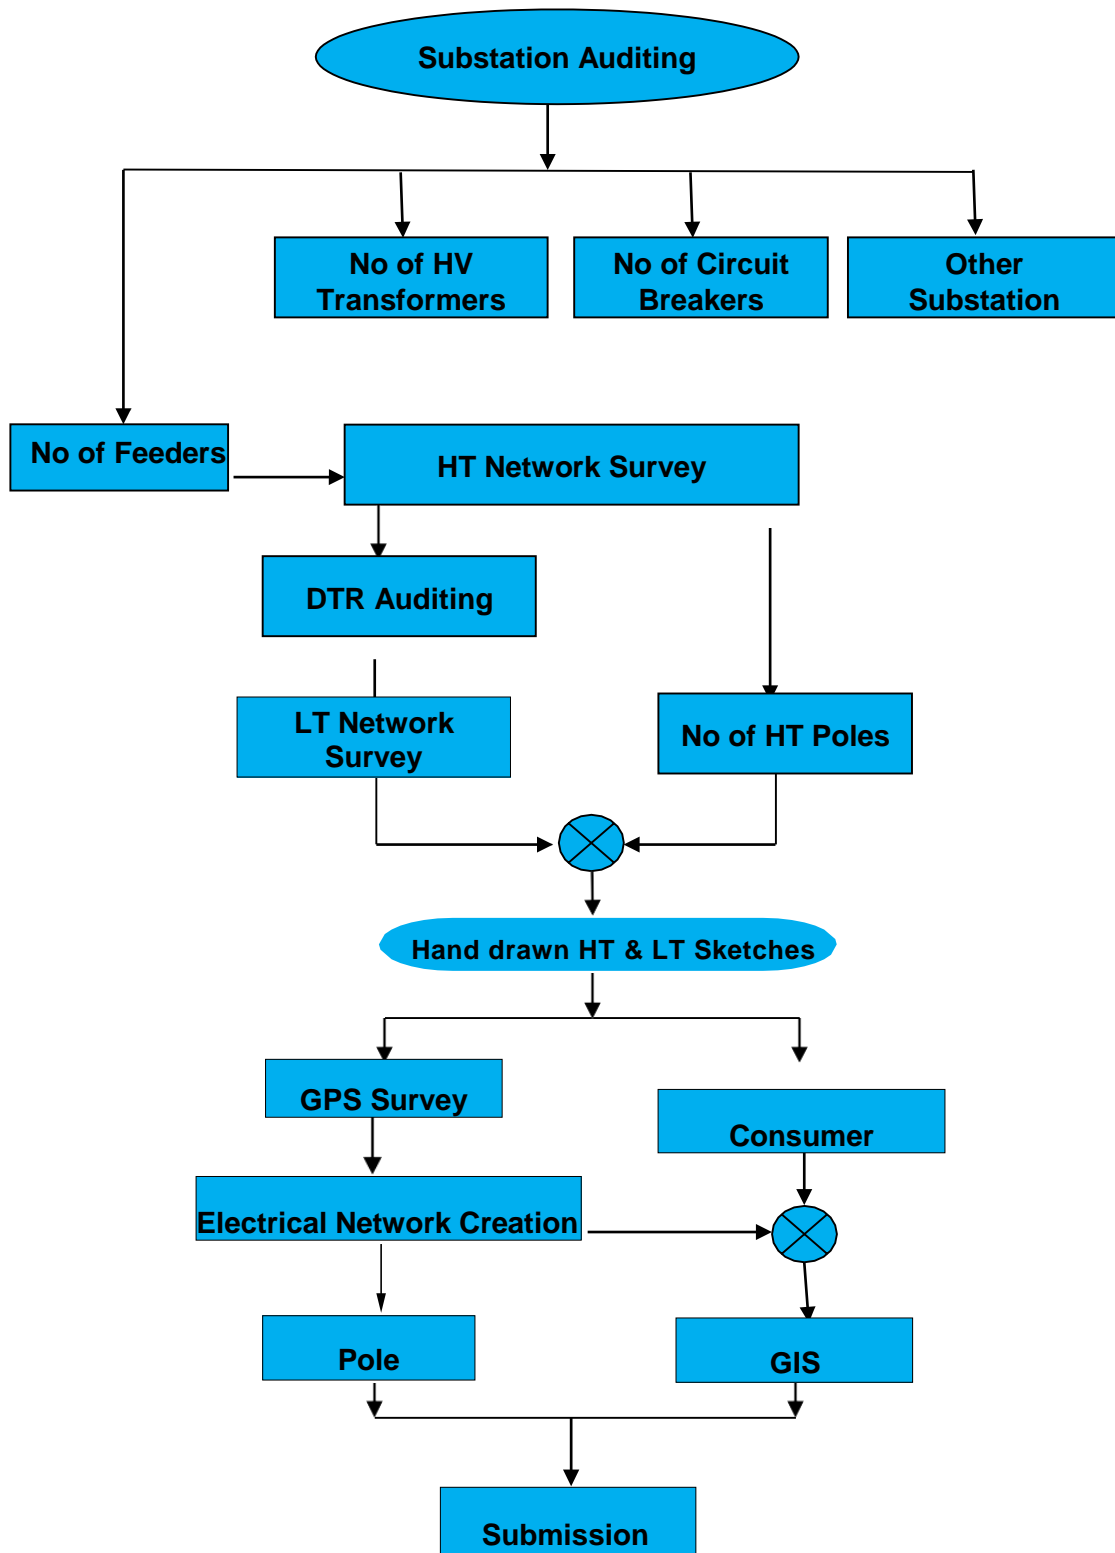

The deliverables will be from the substation to end of HT pole of feeder and end of LT pole of DTR with latitude, longitude and attributes of feeder network elements in a well-defined electrical data model on ArcGIS 10.3 and above version desktop platform, at the Bhaktapur substation PC server, along with necessary soft and hard copies.

Consumer Indexing covering estimated 13,200 consumers connected to the Nagarkot feeder through 100 DTRs with an estimated HT line length of 60km and LT line length of 300 ckt km. The scope of consumer indexing includes survey for consumer database generation as per NEA consumer data format, up to connecting pole/feeder pillar, including phase identification and creation of connected consumer database.

METHODOLOGY

- a) Substation Auditing
- b) 11KV network survey with GPS
- c) DTR auditing
- d) DTR wise LT Network survey
- e) DTR wise Consumer Indexing survey towards the LT pole
- f) Integration of Survey data in to ArcGIS format

Sample Table 4

Quality Check:

The field hand drawn sketches for both HT and LT Sketches were re-visited by QC team to ensure the collected data is error free, the QC team verified the field sketches and log sheets on daily basis.

GPS Survey Instrument:

Garmin Etrex 10 is an instrument used for GPS survey. Garmin Etrex 10 is globally used in various projects; the GPS instrument captures latitude, longitude and elevation of the waypoint. The instrument is operated through battery and has the capacity to store up to 1000 waypoints. The captured data is stored in *.gpx format.

The surveyed waypoints data can be downloaded by connecting the GPS instrument to the computer using USB data cable. The names of the files were stored with date can be accessible through MS Office excel. The accuracy of the GPS points depends on the number of satellites viewed on the screen, i.e. the more satellites the more accuracy.

GPS Survey:

The GPS survey associates carries the field hand drawn sketches to the field and visit each pole as per the SLD, captures the coordinates. While capturing the coordinates survey team ensures to view minimum 5 satellites and the accuracy dialogue should be less than or equal to 3m as shown in the below figure.

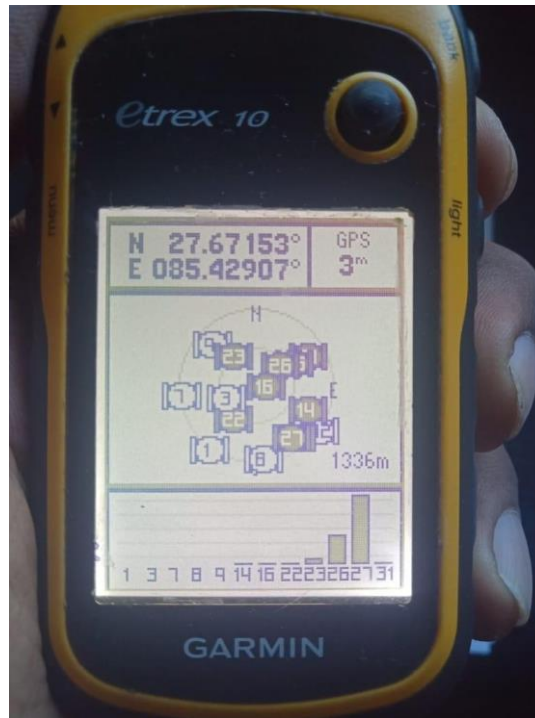

Figure 2 GPS Mapping Device

The above picture shows the number of satellites viewed while collecting the coordinates of electrical assets from the field. The coordinates are stored in the form of waypoints. Each day the waypoints were downloaded and converted to excel format.

GIS Integration:

Softwares: Ms Office Excel, ArcGIS

The *. gpx files which were converted to *.xls files are then converted into point shape file format using the coordinate values collected from field. QC of these converted shape files is done with respective to the field hand drawn SLDs. Electric network mapping is done based on the field SLD and the GPS coordinates which is then over layed on to the open source maps to ensure the locations are matching.

GIS integration is done by updating the field attributes to the point and polyline geometry. ArcGIS software is used to build the shape files and map the surveyed electric network.

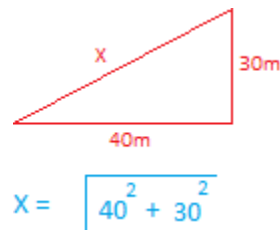

The length of the HT / LT network span is calculated using ArcGIS software using latitude and longitude coordinates as a source.

Network Span Measurement Methodology:

As the pilot project area is a hilly terrain area, ArcGIS software calculates the distance between two poles in only 2D format. It will not consider the elevation aspect.

The elevations are helpful in calculating the distance from pole to pole by using a triangle formula.

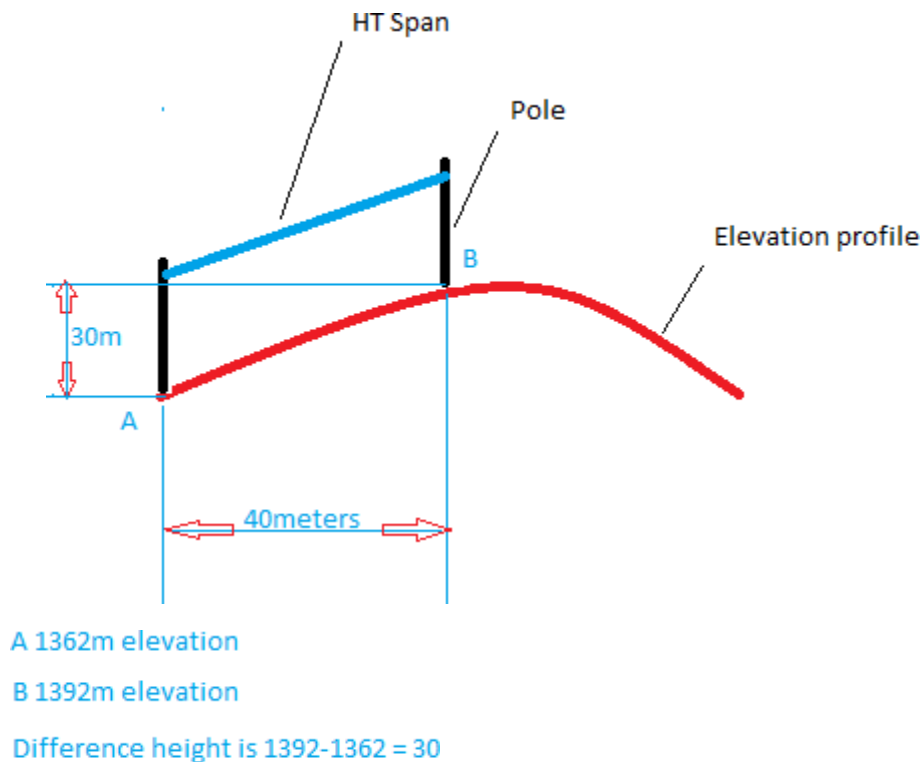

Example:

Below figure illustrates the two poles A & B, HT span segment between the two A & B poles and the elevation profile where A pole with elevation 1362 and B pole with elevation 1392.

The difference height between these two poles is 30m (1392m – 1362m).

The length derived between A & B poles using GIS software is 40m using source with Geo Position coordinate values captured by GPS.

$$\sqrt{40^2 + 30^2} \Rightarrow 50\text{m}$$

The original HT span segment between A & B poles is 50m which is achieved using the above procedure.

The average span length of HT lines is around 53meters, the total length of the Nagarkot feeder is 56km and the no of poles covered the Nagarkot feeder is 1062 poles and Nagarkot region is 50.55 km and the no of poles covered is 954 poles.

Pole Code:

The pole painting codes are separately maintained for HT network and LT network.

Pole Code for HT and HLT pole of the HT network is as below

Substation code	Feeder code	Pole number
BKT	002	0001

As per the Substation the Nagarkot feeder is in the serial order 2, the feeder code can be derived as 002

Pole Code for LT network is as below

Substation code	Feeder code	DTR Number	Pole number
BKT	002	001	001

The pole code was officially approved from Bhaktapur DCS and the pole painting task is ongoing.

Figure 3 Coding of Pole

Survey Analysis:

Nagarkot Feeder has the voltage supply through underground from the substation to the first Pole of the Nagarkot 11kV electric network feeder, from 3rd pole the network distributed to two branches towards the left and right, from the right side branch the network reached near to the Bhaktapur Cancer Hospital and at the 5th pole from the substation with pole code BKT0020005 has an interlink and voltage passage stopped for this feeder using switch operating.

The below figure illustrates interlink at BKT0020005 and the electric network from Substation to 5th pole.

Figure 4 Google mapping and site location

1. The Nagarkot feeder from the 3rd pole distributed the network through the fields and reached Nagarkot road at 9th pole with POLECODE BKT0020009.
2. At 24th pole with POLECODE BKT0020024 Nagarkot 11KV feeder supplied voltage to a Distribution Transformer FROM 26TH pole with POLECODE BKT0020026 to a Private Consumer near the road crossing Kesan river.

The Distribution transformer shown in the below figure is a new transformer which is not mentioned in the data provided by NEA as a single line diagram of Nagarkot feeder.

CONCLUSION

The Nagarkot feeder is physically surveyed along with GPS instrument with accuracy below 3 mtrs, where all the electrical assets DTRs, AB switch, Interlink and Boundary Meters are captured. Nagarkot 11kV electrical network distributes the voltage throughout the Bhaktapur region which passes through the hilly terrain area. Some places of Nagarkot 11 kV feeder passes through the forest with no easy road access for the technical personnel to conduct the network survey.

Nagarkot 11kV electric network covers Bhaktapur region with 2016 numbers of HT and HLT poles covering around 107.40 km in length, 6613 numbers of LT poles covering around 386.47 km in length, 213 DTRs in total

Nagarkot 11kV electrical network has 3 Boundary meters, 16 AB Switches and 10 Interlinks.

Consumer Indexing of the all DTR's has been conducted with total no of 13223 consumers.
