Checklist

Quality Monitoring on Rocket Mud Stoves

What to check	Expected status
Branding	A stamp on the stove to show that the stove was built by a trained builder
Finishing	No cracks The stove should be smooth on the surface and inside
Stove surface	Should be horizontally flat (Use water level to check or a piece of straight wood)
Pot seat	It has to be done to dimension of the pot (Get the pot which was used during construction)
Chimney	<ul style="list-style-type: none">- Properly done and taking the smoke out- The diameter of the chimney should be the same as the combustion chamber (this include the chimney exit)- The chimney should be dry before building around it top conceal the space between the chimney and the wall- In thatched house roof, the exit of the chimney should be at least one meter below the grass
Chimney exit	The chimney exit should be shielded by using a flat metal plate with holes to slow the draft.
User guideline	The user has guidelines for use and maintenance of the stove
