'The forest protects us!' Rehana's home are the Sundarbans, the largest mangrove forest on earth on the border between Bangladesh and India. This unique ecosystem, covering almost 10,000 square kilometres, is also home to some of the last Bengal tigers on earth.

It is an impressive reminder of the precious and fragile relationship between people and nature. Together with local organizations, and people like Rehana, we want to preserve this special, almost magical place. GIZ akzente took a trip to the dense mangrove forest to find out how the locals are living their lives deeply connected to the forest:
